

AAMEC

Session 01 · Live Technical Webinar · Prepared for College Management Coordination

DATE & TIME 18 Sep 2026, 9:50 AM to 12:10 PM IST	TOTAL DURATION 2 hr 20 min	FORMAT Fully Live Demo	PANEL SIZE 4 Speakers
---	-------------------------------	---------------------------	--------------------------

Session Overview

This session is a fully live, hands-on technical build-through of a real-world niche enterprise application, using an environment and codebase that is already built and running. Every segment demonstrates practical, industry-standard tooling in action. Attendees will see live code, live infrastructure, and live deployment decisions exactly as they happen on real engineering teams, covering the full toolchain from requirement gathering through architecture, build, testing, and production operations.

Run-of-Show

#	SEGMENT	SPEAKER(S)	DURATION	CLOCK TIME
1	Introduction & Requirement Gathering	Manikandan	20 min	9:50 - 10:10 AM
2	Technology Stack Selection	Manikandan	20 min	10:10 - 10:30 AM
3	Database: Live Build	Mathavan / Manikandan	20 min	10:30 - 10:50 AM
4	Architecture: Live Walkthrough	Manikandan	10 min	10:50 - 11:00 AM
Break: 5 minutes				
5	Build and Testing: Live Code	Manikandan	20 min	11:05 - 11:25 AM
6	DevOps, Cloud and Observability: Live Demonstration	Kalailvanan / Manikandan	20 min	11:25 - 11:45 AM
7	Closing: Career Guidance	Mannan	15 min	11:45 AM - 12:00 PM
8	Live Question and Answer: Pigeonhole	All Panelists	10 min	12:00 - 12:10 PM

TOTAL SESSION RUNTIME	2 hours 20 minutes (9:50 AM to 12:10 PM IST)
-----------------------	--

Segment Detail: Live Coverage

1. Introduction & Requirement Gathering	Manikandan · 20 min
Live framing of a real niche enterprise application build. This segment walks through how industry teams actually capture requirements, including interviews, document study, and exception-hunting, shown against the live requirement artifacts and user stories from the pre-built application.	
2. Technology Stack Selection	Manikandan · 20 min
Live comparison of language and framework options against real industry decision criteria, including hiring pool, ecosystem fit, and long-term maintainability. The actual stack decision behind the running codebase is opened and reviewed live in the repository.	
3. Database: Live Build	Mathavan / Manikandan · 20 min
Live walkthrough of the running schema, covering the relational core, caching layer, and offline or edge data store. Live queries and migrations are executed against the real environment.	
4. Architecture: Live Walkthrough	Manikandan · 10 min
Live tour of the deployed system architecture, covering service boundaries, data flow, and the shape decision behind the running environment, shown directly from the live infrastructure rather than a diagram.	
5. Build and Testing: Live Code	Manikandan · 20 min
Live pull request walkthrough on the real repository, covering branching, review, and merge. The actual test suite is run live, including the concurrency and race-condition tests that matter most in production systems. AI-assisted code review is shown in action.	
6. DevOps, Cloud and Observability: Live Demonstration	Kalailvanan / Manikandan · 20 min
Full live pipeline run: containerization with Docker, deployment to Kubernetes, the same workload shown running across AWS and Azure, and enterprise integration touch-points with SAP. Live CI/CD execution from lint through deploy, plus a live monitoring dashboard with a simulated incident and real-time rollback.	
7. Closing: Career Guidance	Mannan · 15 min
Industry takeaways on what AI has changed in the engineering workflow versus what still requires human judgment. Career guidance for students and mid-level engineers attending the session.	
8. Live Question and Answer: Pigeonhole	All Panelists · 10 min
Open floor session in which audience questions submitted via Pigeonhole are answered live by the full panel.	

Panelists

Manikandan	Session Lead
Senior Full-Stack Architect and Engineering Lead, currently delivering an enterprise liquidity management and cash operations platform for a major banking client. Founder and Software Architect of Aadhirai Innovations, building ERP, billing, SaaS, and AI-assisted business intelligence solutions for enterprises and SMEs.	
Mathavan	Data Architect
Independent consultant specializing in data architecture and database engineering, with hands-on experience designing and optimizing enterprise-grade database systems across client engagements.	
Kalailvanan	Infrastructure & DevOps Lead
Vice President, Infrastructure and DevOps at DBS Bank, Singapore. Leads infrastructure strategy and DevOps practice for enterprise banking systems, with deep experience in production-grade deployment, cloud operations, and platform reliability at scale.	
Mannan	Product Owner
Product Owner at Volvo, bringing an industry product-management perspective on translating business requirements into engineering roadmaps and guiding delivery from concept through release.
